

**EVERY ONE COUNTS**

The DestroJect syringe is developed by request of the World Health Organization to minimize the spread of infectious diseases. The DestroJect syringe has been successfully tested and approved by the World Health Organization as the first autodestruct syringe in the world. Now, the development of the second generation of this outstanding syringe has been completed, and an even safer syringe has seen the light of day.

The DestroJect Syringe is a so-called autodestruct or autodisable syringe. It is designed to provide maximum safety for children receiving immunization shots while maintaining the ease of use for the health care workers.

Whereas a normal syringe consists of a plunger and a cylinder, the DestroJect syringe has a small plastic ratchet that prevents the syringe from being filled more than once. By the attempt to withdraw the plunger a second time by force, the plunger brakes.

The main size of the DestroJect syringe is the 0.5 ml In addition to that we can supply 1 ml DestroJect syringes as well The concept is very well suitable for the sizes 3ml, 5ml and 10 ml as well.

The DestroJect syringe has been successfully tested and approved by the World Health Organization as the first autodestruct syringe in the world.

---

The World Health Organization (WHO) estimates that at least 50 percent of the World's 12 billion injections administered each year are unsafe - posing serious health risks to recipients, health workers, and the public.

Unsafe injections transmit 8 - 16 million Hepatitis B virus infections, 3 million Hepatitis C and between over 100.000 HIV infections every year.

The DestroJect syringe is developed by request of the World Health Organization to minimize the spread of infectious diseases. WHO and many international aid organizations are committed to supplying healthy, safe injections.

---

Autodisable means single use-  
and single use only, NO  
matter how inventive the user

The major benefits of the DestroJect syringe are:

**Highest level of autodestruction (very difficult to tamper with)**

**Ease of use - no special instructions necessary**

**Very environmental friendly - no toxic fumes by incineration, and no parts that can not be incinerated - only the needle remains**

**Easy-to-Read batchnumber on each syringe**

**Hard-pack for fast and easy handling**

**D**estroJect is designed for use in the immunization programmes as per the specifications of the World Health Organization.

DestroJect supplied in a "hard-pack" without paper wrapping, which eases the medical preparation and minimizes waste.

Non-compromising quality has been our trademark since the beginning. Our company is ISO certified according to ISO 9001, and our products carry the CE mark. We pride ourselves of having the best quality of our industry.

**A Safe injection  
for every child  
every time!**
